

ABSTRACT

The invention concerns a method for the prevention/curing/treatment of diarrhoea in mammals by administering the mammals an effective daily
5 amount of a composition comprising as active component(s) phytosterols
and/or pentacyclotriterpenes as present in or derived from Shea oil as well
as a method for the preparation of a food or a feed product comprising
carbohydrates and proteins wherein the food or feed product has anti-
diarrhoea or anti scouring properties by the incorporation of an effective
10 amount of phytosterols and/or pentacyclotriterpenes as present in or derived
from Shea oil as active component.
